

EDU560: Methods of Teaching Technology Concepts with Practicum

This course addresses issues in teaching children and adults how to use instructional technology to enhance learning and increase productivity. Topics will include, but are not limited to, learning theories related to technology skills acquisition, classifications of technology used in schools, identifying, evaluating, and designing technology professional development resources for teachers, and technology standards for students and teachers. Through the practicum, this course will provide experiences working with teachers who are implementing technology in instructional units and with students.

Credit Hour(s): 3

Prerequisites:

Admission to IT endorsement program and successful completion of at least 2 technology courses.

Department: [Education](#)
